FRONT SPLITTER

WOLFRACE VEHICLE ENHANCEMENTS VAN ACCESORIES

FRONT SPLITTER

Front splitter products are produced with 4mm Gloss black ABS plastic raw material. In general, LG and Samsung raw materials are used. UV contribution is included in the raw material used. Thanks to this UV contribution, the risk of fading against the sun's rays, to which the front splitter product is constantly exposed, is eliminated. Thanks to the high flexibility in our products, problems such as breakage are very low and this provides a more effective installation experience.

It comes with gelatin on the product. The reason for the presence of gelatin on the products is to protect the products against risks such as scratching. With the smart screws in the product, the installation process is carried out quickly and easily

FENDER FLARES

Pickup fender flares products are produced with 4mm Siyat Matte ABS plastic raw material. In general, LG and Samsung raw materials are used. UV contribution is included in the raw material used. Thanks to this UV contribution, the risk of fading against the sun's rays, which fender flares are constantly exposed to, is eliminated. Thanks to the high flexibility in our products, problems such as

breakage are very low and this provides a more effective installation experience. Fender flares products can be painted thanks to their raw material content.

The products have stainless lnox screws and rubbers on them. These parts come installed in the product and the product is ready for direct installation. Regarding stainless inox screws, they can also be shipped without opening and installing holes in the product depending on customer request. No drilling is carried out on the vehicle for stainless lnox screw product. Thanks to Rubber, which is attached to the product, the vehicle body part is protected.

BONNET SCOOP

Bonnet Scoop products are produced with 1.8mm Siyat Matte ABS plastic raw material. In general, LG and Samsung raw materials are used. UV contribution is included in the raw material used. Thanks to this UV contribution, the risk of fading against the sun's rays, to which wheel arch trims are constantly exposed, is eliminated. Thanks to the high flexibility in our products, problems such as breakage are very low and this provides a more effective installation experience. Bonnet Scoop products can be painted thanks to their raw material content.

3M TAPE 94 primary, which is primarily liquid on the product surface, is applied, after which the double-sided tape product is installed on top of this application. Thanks to this application, product strength is maximized and assembly is carried out on the vehicle without any drilling process. The body cladding product protects against all impacts that may come to the vehicle. Protects the vehicle against impacts on the hood. Thanks to the water channels located on it, it allows them to be disposed of much faster in weather conditions such as rain and snow. Gives the vehicle an aggressive appearance.
